Week 10

The screenshot shows a web browser window with the Code School website. The left sidebar contains a summary page titled "Summary #8, The Hey-Relax-You-Did-Good Summary". The main content area on the right shows a code editor with a Ruby script that calculates the time remaining until March 14, 2013. The script uses `Time.now - 2.weeks` and `Time.at` to calculate the difference, resulting in a "Success!" message. The bottom of the page features a cartoon cat character, a list of keyboard shortcuts, and a footer with credits and a link to create a Code School account.

Summary #8, The Hey-Relax-You-Did-Good Summary

This last section took a moment to wind down, to give you some pointers as to how you can use Ruby. If you enjoyed yourself, download Ruby and install it.

- For Mac: [RVM](#)
- For Windows: [Rails Installer for Windows \(includes Ruby\)](#)
- Other platforms: [Source](#)

Once you have Ruby installed, you can use Interactive Ruby by running `irb` on your system's prompt.

You really deserve a double-layer cake with double-double frosting and a guy playing one of those guitars that's a double guitar. I mean you finished, you really did! No doubt about it, you're a certified red-blooded smartiac!

credits attribute to [why's \(poignant\) guide to ruby](#), chunky bacon.

```
> next
> next
> Time.now - 2.weeks
=> 2013-03-14 21:38:13 +0000
Success!
>
```

shortcuts and commands.

Enter / Return → Submit code
Up → Cycle through submitted code
clear → Clear the editor window
back → Return to the previous lesson
next → Move to the next lesson

Save your progress by [creating](#) a Code School account.
